

Insect sociality

- Co-operative behaviors
 - Eusocial: co-operate in reproduction and have division of reproductive effort (bees, wasps, ants, termites)
 - Subsocial: less developed social habits (many insects)
 - Solitary: no social behaviors (most insects)

Features of social behaviour

- ▣ Social insects always live in a large population.
- ▣ Members of colony cooperate with each others for food ,shelter and protection.
- ▣ It shows polymorphism.
