

CONTROL OF AIR POLLUTION:

- (i) Reforestation helps in maintaining carbon dioxide level.
- (ii) Sulphur should be removed before burning the fossil fuels.
- (iii) Always use smokeless fuels, natural gas and nuclear power.
- (iv) Automobile Exhausts should be checked strictly with air cleaner filters.
- (v) Devices like cyclone collectors and Electrostatic Precipitator should be used by industries to remove harmful particles from their waste gases.
- (vi) The poisonous gases should be treated chemically before releasing it in the atmosphere.
